## Serving New York City's Information Technology Community

Founded in the 1980's, MITC is an association of NYC agency IT CIO's, technology directors and senior staff who unite and meet for purposes of

- Sharing information pertinent to City IT professionals and other interested parties.
- Fostering communication between City agencies.
- Encouraging networking among City professionals.
- Volunteering assistance and consultation to agencies in need of advice.
- Providing venues for educational presentations and seminars.
- Presenting and discussing the latest software and hardware technological developments, and how these developments relate to the City IT community.
- Creating forums for conveying and discussing the City's short-range and long-range plans for Information Technology.
- Offering a clearing house to various City oversight agencies for the prevailing opinions of our members regarding IT problems, issues, needs, recommendations and opportunities.
- Providing leadership, direction and coordination in the establishment of policy proposals and systems which may serve more than one agency.
- Presenting ideas to Administration officials by which the City can save money, improve service delivery and enhance revenue.
- Conveying our members' thoughts on IT job descriptions, salary levels, advancement, recruitment, training and staff retention.
